

Find out more:

VIN READER

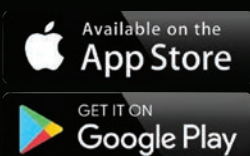

The ABRITES VIN Reader App is an innovative mobile application which allows you to read the vehicle's identification number, stored mileage in different modules and to generate comprehensive report with the click of a button!

The Bluetooth-enabled interface is compatible with most vehicle brands on the market. It allows you to connect to the vehicle and read the VIN numbers and stored kilometers in it via the OBDII port.

Within 30 seconds the VIN Reader shows the identification numbers, then cross-checks it against a couple of databases for stolen vehicles which ensures safety and security, both for professionals and for end users. Using the VIN Reader you can also check the mileage in each module and see if it has been tampered with in any way.

HOW IT WORKS:

The mobile diagnostic interface (MODI) works with the designated VIN Reader application, available for download for iOS and Android devices.

COMPREHENSIVE REPORTS:

- Save the read VINs and kilometers from all modules to a file!
- Share this report wherever you are!

SELECTIVE SCAN:

- Choose what to scan - VIN or Mileage data, or both!
- Convert miles to kilometers from the settings tab in the app!

WHO IS IT FOR?

- Law enforcement officials
- Insurance professionals
- Dealerships representatives
- Garage and workshop specialists
- Anyone interested in their vehicle's history

ONE MOBILE DIAGNOSTIC INTERFACE - TWO APPS IN YOUR ASSET!

The mobile diagnostic interface (MODI) can also be used with the MODI App! MODI offers fast and reliable basic and advanced diagnostics for your vehicle. You can detect and erase fault codes, see live values, test actuators, and all that jazz. But what's even better is that you can access coding options and customisations, such as CarPlay activation, Start/Stop system enable and disable, folding mirrors, and hundreds more!
